

CheckKaro

Complete Ingredient Classification Database — 500 Ingredients

Food | Cosmetics | Personal Care | Nutraceuticals

Sources: FSSAI · EFSA · FDA · WHO/IARC · EU Regulations · Codex Alimentarius | checkkaro.in

CLASSIFICATION KEY	COMMONLY QUESTIONED — Regulatory bans/restrictions or well-documented health risks in scientific literature	WORTH KNOWING — Permitted but with considerations at high intake or for sensitive individuals	GENERALLY RECOGNISED — No notable regulatory concerns at normal use levels
--------------------	--	---	---

COMMONLY QUESTIONED — 97 Ingredients (Red Flag)

#	Ingredient Name	Type / Function	Key Health Concern	Banned / Restricted In
1	Triclosan	Antimicrobial preservative	Hormone (thyroid/estrogen) disruption; promotes antibiotic resistance; bioaccumulates	EU (cosmetics ban since 2017), USA (FDA banned in hand soaps 2016), Canada (restricted)
2	Sodium Benzoate (E211)	Preservative	Reacts with vitamin C to form benzene (IARC Group 1 carcinogen); linked to ADHD in children	EU (mandatory warning if combined with vitamin C), California Prop 65 (carcinogen list)
3	Sodium Metabisulphite (E223)	Sulphite preservative	Triggers severe asthma attacks; destroys vitamin B1; anaphylaxis in sensitive people	EU (must declare on label), Australia (mandatory declaration above 10ppm)
4	Sulfur Dioxide (E220)	Sulphite preservative	Destroys thiamine (B1); triggers asthma attacks; severe allergic reactions	EU (must declare), Australia (declaration required)
5	Potassium Metabisulphite (E224)	Sulphite preservative	Asthma trigger; allergic reactions; destroys vitamin B1	EU (must declare), Australia (declaration required)
6	Sodium Nitrite (E250)	Curing agent in meat	Forms carcinogenic nitrosamines at high heat (cooking); linked to colorectal cancer (IARC Group 1)	EU (strict concentration limits), UK (restricted since 2022), Nordic countries (restricted)
7	Sodium Nitrate (E251)	Curing / preservative in meat	Converts to nitrite in the body; associated with colorectal cancer (IARC Group 1)	EU (restricted concentration), Nordic countries (restricted)
8	Potassium Nitrite (E249)	Curing agent in meat	Converts to nitrosamines; carcinogenic at high heat	EU (strict concentration limits)
9	Potassium Nitrate (E252)	Curing / preservative in meat	Converts to nitrite; colorectal cancer risk (IARC Group 1)	EU (restricted concentration)
10	Methylparaben (E218)	Paraben preservative	Weak estrogen mimic; accumulates in breast tissue; disrupts endocrine system	Denmark (banned in children's products), EU (concentration restricted)
11	Propylparaben (E216)	Paraben preservative	Endocrine disruptor; reduces sperm count; reproductive toxicity in animals	Denmark (banned children's products), EU (banned in products for children under 3)
12	Butylparaben (E214)	Paraben preservative	Strongest endocrine disruptor among parabens; bioaccumulates; reproductive harm	Denmark, EU (banned in products for children under 3), Japan (restricted)
13	Isobutylparaben	Paraben preservative	Endocrine disruption; hormone mimicry; reproductive toxicity	EU (banned in cosmetics since 2015)
14	Isopropylparaben	Paraben preservative	Endocrine disruption; hormone interference	EU (banned in cosmetics since 2015)
15	Phenylparaben	Paraben preservative	Hormone disruption; insufficient safety data	EU (banned in cosmetics)
16	Benzylparaben	Paraben preservative	Hormone disruption; skin sensitization	EU (banned in cosmetics)

17	Methylisothiazolinone (MIT)	Preservative	Powerful skin allergen; severe contact dermatitis; neurotoxic in vitro	EU (banned in leave-on cosmetics), Canada (restricted)
18	Methylchloroisothiazolinone (CMIT)	Preservative	Severe contact dermatitis; neurotoxic; respiratory sensitizer	EU (restricted rinse-off, banned leave-on), Japan (restricted)
19	Formaldehyde (E240)	Preservative / crosslinker	IARC Group 1 carcinogen; sensitizer; causes allergic contact dermatitis	EU (banned in cosmetics above 0.001% in leave-on), Japan (banned in some uses), Sweden
20	DMDM Hydantoin	Formaldehyde-releasing preservative	Releases formaldehyde (IARC Group 1 carcinogen); strong skin sensitizer	EU (restricted - must declare formaldehyde release), Japan (restricted)
21	Quaternium-15	Formaldehyde-releasing preservative	Releases formaldehyde; most common cause of cosmetic contact dermatitis	EU (restricted), Japan (restricted)
22	Imidazolidinyl Urea	Formaldehyde-releasing preservative	Releases formaldehyde; contact allergen; skin sensitizer	EU (must declare if formaldehyde released), Japan
23	Diazolidinyl Urea	Formaldehyde-releasing preservative	Releases formaldehyde; contact dermatitis; sensitizer	EU (must declare formaldehyde release)
24	Tartrazine (E102 / Yellow 5)	Synthetic azo dye	Hyperactivity and ADHD in children (McCann study); asthma attacks; cross-reacts with aspirin	Austria, Norway, EU (mandatory warning on label)
25	Sunset Yellow FCF (E110 / Yellow 6)	Synthetic azo dye	Hyperactivity in children; hives; asthma; possible carcinogenicity at high doses	Norway, Finland, EU (mandatory warning on label)
26	Allura Red AC (E129 / Red 40)	Synthetic azo dye	Hyperactivity in children; immune system tumors in mice; allergic reactions	Denmark, Belgium, France, Germany, Switzerland, Sweden, Austria, Norway, EU (warning label)
27	Ponceau 4R (E124)	Synthetic azo dye	Hyperactivity; thyroid problems in animal studies; asthma attacks	USA, Norway, Finland, EU (warning label)
28	Carmoisine (E122 / Red 3)	Synthetic azo dye	Hyperactivity; asthma attacks; allergic urticaria (hives)	USA, Canada, Japan, Austria, Norway, Sweden
29	Quinoline Yellow (E104)	Synthetic coal-tar dye	Hyperactivity in children; contact dermatitis; eczema	USA, Canada, Japan, Australia, Norway
30	Brown HT (E155)	Synthetic azo dye	Hyperactivity; asthma; skin rashes	USA, Canada, Australia, Belgium, France, Switzerland
31	Brilliant Blue FCF (E133 / Blue 1)	Synthetic coal-tar dye	Crosses blood-brain barrier; chromosomal damage; neurotoxicity in high doses	Belgium, France, Germany, Greece, Italy, Spain, Switzerland
32	Indigo Carmine (E132 / Blue 2)	Synthetic indigoid dye	Brain tumors in animal studies; skin rashes; nausea	Norway, UK (restricted)
33	Erythrosine (E127 / Red 3)	Synthetic xanthene dye	Thyroid tumors in male rats (high dose); thyroid hormone disruption	Norway, USA (banned in cosmetics 1990), EU (restricted use)
34	Green S (E142)	Synthetic triarylmethane dye	Hyperactivity; limited safety data; asthma trigger	USA, Canada, Japan, Norway
35	Fast Green FCF (E143)	Synthetic triphenylmethane dye	Bladder tumors in animal studies; genotoxicity concerns	EU, Austria, Norway, Sweden, UK, Belgium, France, Germany, Switzerland
36	Amaranth (E123)	Synthetic azo dye	Suspected carcinogen in animal studies; birth defects in animal studies	USA (banned since 1976), Russia, Austria, Norway
37	Azorubine / Carmoisine (E122)	Synthetic azo dye	Hyperactivity; asthma; hypersensitivity reactions	USA, Canada, Japan, Norway, Sweden
38	Red 2G (E128)	Synthetic azo dye	Converted to aniline (carcinogen) in the body	EU (suspended 2007), USA, Australia, Canada

39	Monosodium Glutamate / MSG (E621)	Umami flavor enhancer	Chinese Restaurant Syndrome; headaches, flushing, sweating; neurotoxicity at high repeated doses	—
40	Disodium Guanylate (E627)	Flavor synergist with MSG	Headaches, numbness, flushing; unsafe for gout patients; MSG-like effects	Restricted for use in infant foods globally
41	Disodium Inosinate (E631)	Flavor synergist with MSG	Sweating, chest pain, nausea in sensitive individuals; gout risk (purine compound)	Restricted for use in infant foods globally
42	Disodium Succinate (E626)	Flavor enhancer	MSG-like reactions in sensitive individuals; headaches	—
43	Calcium Glutamate (E623)	Flavor enhancer	Same concerns as MSG; headaches; nausea in sensitive people	—
44	TBHQ — Tert-Butylhydroquinone (E319)	Synthetic antioxidant	Stomach tumors in animal studies at high doses; DNA damage in vitro; liver tumors in rats	Japan (banned), EU (restricted max 100mg/kg in fat), Australia (concentration limits)
45	BHA — Butylated Hydroxyanisole (E320)	Synthetic antioxidant	IARC Group 2B (possible human carcinogen); mimics estrogen; disrupts thyroid	Japan (banned from fats/oils), EU (restricted), California Prop 65 (carcinogen list)
46	BHT — Butylated Hydroxytoluene (E321)	Synthetic antioxidant	Liver/kidney tumors in animal studies; mimics estrogen; suspected carcinogen	Japan (restricted), EU (restricted usage levels)
47	Propyl Gallate (E310)	Synthetic antioxidant	Allergic reactions; asthma; may have estrogenic activity; thyroid disruption	Australia (restricted), EU (concentration limits)
48	Octyl Gallate (E311)	Synthetic antioxidant	Gastrointestinal irritation; allergic reactions; limited safety data	Australia (banned as food additive), UK
49	Dodecyl Gallate (E312)	Synthetic antioxidant	Contact dermatitis; allergic reactions; insufficient safety data	Australia (banned as food additive)
50	Potassium Bromate (E924)	Flour improver / oxidizer	IARC Group 2B carcinogen; kidney and thyroid tumors; genotoxic	European Union, United Kingdom, Canada, Brazil, China, Sri Lanka, Nigeria, Peru, Australia, India (partially banned)
51	Azodicarbonamide (E927a)	Flour improver / dough conditioner	Breaks down to semicarbazide (carcinogen) during baking; respiratory sensitizer	European Union, United Kingdom, Australia, Singapore, Most of Asia
52	Benzoyl Peroxide (E928)	Flour bleaching agent	Destroys vitamins in flour (B1, B2, folic acid); respiratory irritant	EU (banned as flour treatment), Australia (restricted)
53	Chlorine (E925)	Flour bleaching agent	Reacts with organic matter to form chlorinated compounds; destroys vitamins	EU (banned as flour treatment), UK
54	Chlorine Dioxide (E926)	Flour bleaching agent	Destroys vitamins; forms toxic chlorinated by-products	EU (banned as flour treatment)
55	Brominated Vegetable Oil (BVO)	Emulsifier in citrus beverages	Contains bromine; accumulates in fatty tissue and brain; neurological effects	European Union, Japan, India, UK (banned 2023)
56	Cyclamate (E952)	Artificial sweetener	Bladder cancer in animal studies; converted to cyclohexylamine (toxic) by gut bacteria	USA (banned since 1969), Japan (banned)
57	Phosphoric Acid (E338)	Acidulant in soft drinks	Erodes tooth enamel; reduces bone mineral density; kidney stone formation; calcium depletion	EU (labelling required), Some countries restrict in children's drinks
58	Caramel Colour E150c (Ammonia Process)	Brown color additive	Contains carcinogenic 4-methylimidazole (4-MEI); IARC Group 2B (animal carcinogen)	California Prop 65 (warning required in beverages), EU (usage limits under review)
59	Caramel Colour E150d (Ammonia-Sulphite Process)	Brown color additive	Highest levels of 4-MEI (carcinogen); also contains 2-MEI; linked to cancer in animal studies	California Prop 65 (above 29mcg/day requires cancer warning), EU (under review)

60	Aspartame (E951)	Artificial sweetener	IARC classified as "possibly carcinogenic" (Group 2B) in 2023; headaches; seizures in PKU patients	EU (mandatory PKU warning), Must declare on all labels globally
61	Saccharin (E954)	Artificial sweetener	Bladder cancer in male rats at very high doses; FDA requires warning label history	Canada (restricted), EU (must declare on label)
62	Cyclamate / Sodium Cyclamate (E952)	Artificial sweetener	Bladder tumors in animal studies; converted to cyclohexylamine by gut bacteria	USA (banned 1969), Japan, UK (banned)
63	Hydroquinone	Skin-lightening agent	Ochronosis (blue-black skin discolouration with long use); cytotoxic; possible carcinogen	EU (banned in cosmetics), Japan (restricted), Australia (prescription only), Several African countries (banned)
64	Mercury (Mercurous Chloride / Thiomersal)	Skin-lightening / preservative	Neurotoxic; accumulates in brain, kidneys, liver; causes tremors and memory loss	Globally banned in cosmetics (Minamata Convention), EU, USA, India, Canada
65	Lead Acetate	Hair color (progressive)	Neurotoxin; accumulates in bones; developmental harm in children	EU (banned in cosmetics), Canada, Japan, Australia
66	Toluene	Nail polish solvent	Neurotoxin; reproductive toxin; developmental harm to fetuses	EU (banned in cosmetics), Japan (restricted), California (listed reproductive toxin)
67	Dibutyl Phthalate (DBP)	Plasticizer in nail polish	Endocrine disruptor; reproductive toxin; developmental toxin (Category 1B)	EU (banned in cosmetics), Canada, Japan (restricted)
68	Diethylhexyl Phthalate (DEHP)	Plasticizer	Endocrine disruptor; reproductive toxin; IARC Group 2B carcinogen	EU (banned in many applications), USA (CPSC restricted in toys), Canada
69	Coal Tar Dyes (general)	Synthetic hair / cosmetic color	Contains carcinogenic polycyclic aromatic hydrocarbons (PAHs); skin sensitizer	EU (restricted), Canada (banned in cosmetics), USA (restricted)
70	Resorcinol	Hair dye / skin exfoliant	Thyroid disruptor; skin sensitizer; toxic to aquatic life	EU (restricted in cosmetics), Japan (restricted)
71	p-Phenylenediamine (PPD)	Oxidative hair dye	Strong skin sensitizer; cross-reacts with many medicines; associated with bladder cancer in long-term use	EU (concentration restricted), Japan (restricted)
72	Oxybenzone (Benzophenone-3)	Chemical UV filter in sunscreen	Endocrine disruptor (estrogen mimic); detected in blood and breast milk; coral reef damage	Hawaii (banned to protect coral reefs), Palau (banned), US Virgin Islands, Key West Florida
73	Octinoxate (Ethylhexyl Methoxycinnamate)	Chemical UV filter	Endocrine disruption (thyroid and estrogen); coral bleaching; detected in human milk	Hawaii (banned), Palau (banned), US Virgin Islands
74	Homosalate	Chemical UV filter	Penetrates skin; weak endocrine disruptor; EU lowered limit to 0.5% in 2021	EU (concentration restricted to 0.5% from 2021)
75	Octocrylene	UV filter / photoprotector	Converts to benzophenone (potential carcinogen) over time; accumulates in coral	EU (under review), Hawaii (banned)
76	Aluminium Chlorohydrate	Antiperspirant active	Linked to breast cancer (near armpit application); aluminium neurotoxicity concerns	EU (concentration restricted), France (recommended limits)
77	Aluminium Zirconium Tetrachlorohydrate	Antiperspirant active	Aluminium accumulation concerns; possible breast cancer and Alzheimer's link	EU (concentration limits)
78	Sodium Lauryl Sulphate (SLS as irritant grade)	Surfactant used in oral care tests	Oral ulcer trigger (canker sores); mucosal irritation; damages taste buds temporarily	EU (restricted concentration in toothpaste)
79	Mineral Oil (heavy / technical grade)	Occlusive / cheap filler	Untreated/mildly treated mineral oil is IARC Group 1 carcinogen; may contain PAHs	EU (untreated/mildly treated mineral oil banned in cosmetics)
80	Formaldehyde in Nail Products	Nail hardener	IARC Group 1 carcinogen; causes allergic contact dermatitis; respiratory sensitizer	EU (banned in cosmetics above 0.001% leave-on), California (Prop 65)

81	Acetaldehyde	Flavor / processing contaminant	IARC Group 1 carcinogen (in alcoholic beverages); respiratory irritant; mutagen	EU (restricted as flavouring), WHO advises elimination
82	Acrylamide	Process contaminant in starchy fried/baked foods	IARC Group 2A (probable human carcinogen); forms when starchy foods cooked above 120°C	EU (benchmark levels 2017), California Prop 65 (warning required)
83	Bisphenol A (BPA)	Plasticizer / can lining	Endocrine disruptor (estrogen mimic); developmental neurotoxin; linked to breast cancer	EU (banned in baby bottles, food packaging under review), Canada (declared toxic), France (banned in food contact materials)
84	Styrene	Plastic packaging contaminant	IARC Group 2B possible carcinogen; neurotoxic; may leach from polystyrene containers	EU (restricted in food contact materials), California Prop 65
85	Sudan Dyes (I, II, III, IV)	Illegal synthetic azo dyes used to adulterate food	Genotoxic and carcinogenic (IARC); Sudan I is Group 3 — found illegally in chilli powder, paprika, palm oil	Globally banned as food additives, EU (zero tolerance since 2003), India (FSSAI banned), USA
86	Malachite Green	Banned synthetic dye used in aquaculture	Carcinogenic; genotoxic; teratogenic; accumulates in fish tissue	Globally banned in food-producing fish, EU, USA, India (FSSAI banned), Canada
87	Chloramphenicol	Banned antibiotic (food animals)	Aplastic anaemia in humans even at trace levels; carcinogenic potential; no safe threshold	Globally banned for use in food animals, EU, USA, India, Canada, Australia
88	Melamine (food adulteration)	Industrial chemical illegally added to food/milk to fake protein content	Kidney stones and kidney failure; especially fatal in infants (2008 China scandal)	Globally banned as food ingredient, EU (zero tolerance), USA, India
89	1,4-Dioxane	Carcinogenic contaminant in ethoxylated cosmetics (SLES, PEG, polysorbates)	IARC Group 2B possible carcinogen; forms as by-product of ethoxylation; not disclosed on labels	EU (trace limits set for cosmetics), USA (FDA monitoring programme), California Prop 65
90	Nitrosamines (N-nitrosamines)	Carcinogenic contaminants formed in nitrite-preserved food or certain cosmetics	IARC multiple members are Group 1/2A carcinogens; DNA alkylation; liver and stomach cancer	EU (maximum limits in food), Germany (restricted in cosmetics), USA (FDA monitoring)
91	Polycyclic Aromatic Hydrocarbons (PAH)	Carcinogenic contaminants in smoked, grilled, charred foods	Benzo[a]pyrene is IARC Group 1 carcinogen; mutagen; DNA damage; forms in charred meat/fish	EU (maximum levels for benzo[a]pyrene in smoked fish, meat), WHO (limits recommended)
92	Heterocyclic Amines (HCA)	Carcinogens formed when meat is cooked at very high temperature (grilling, pan-frying)	IARC Group 2A probable human carcinogens; DNA mutations; linked to colorectal and breast cancer	WHO recommends limiting consumption, IARC monitoring
93	Acrolein	Toxic aldehyde formed when cooking oils overheat (deep frying)	Highly reactive; lung irritant; DNA damage; mutagenic; associated with cardiovascular disease	EU (occupational exposure limits set), California Prop 65 (listed carcinogen)
94	Dihydroxyacetone (DHA) — spray-on tanning	Self-tanning active (safe topically, concerns with spray)	Safe in creams/lotions; spray-on DHA inhalation causes potential lung DNA damage; absorbed via lungs	EU/USA (FDA warns against inhaling spray-on DHA), Australia (TGA advisory for spray form)
95	Polyacrylamide (cosmetic grade)	Film-forming polymer (releases acrylamide)	Acrylamide monomer residue is IARC Group 2A probable carcinogen; reproductive toxin; neurotoxin	EU (max 0.1 ppm acrylamide residue), Canada (restricted)

96	Nonylphenol Ethoxylates (NPE)	Surfactant / emulsifier	Strong endocrine disruptor; degrades to nonylphenol in environment (persistent xenoestrogen); fish reproductive toxicity	EU (banned in household/personal care products), Canada (restricted), Norway
97	Bronopol (2-Bromo-2-nitro propane-1,3-diol)	Formaldehyde-releasing preservative	Releases formaldehyde and bromine; forms carcinogenic nitrosamines; strong sensitizer	EU (restricted — must declare formaldehyde release), Japan (restricted)

WORTH KNOWING — 155 Ingredients (Caution)

#	Ingredient Name	Type / Function	Key Health Concern	Banned / Restricted In
98	Acesulfame Potassium / Acesulfame K (E950)	Artificial sweetener	Some studies suggest disruption of gut microbiome; insulin response changes; headaches	—
99	Sucralose (E955)	Artificial sweetener	Alters gut bacteria composition; may affect insulin response; bakes into toxic compounds above 120°C	—
100	Neotame (E961)	Artificial sweetener	Limited long-term human data; metabolizes to formaldehyde and aspartic acid	EU (labelling required)
101	Advantame (E969)	Artificial sweetener	Very limited human data; very new approval; metabolizes to phenylalanine	EU (labelling required for PKU)
102	Stevia / Steviol Glycosides (E960)	Natural-derived sweetener	May lower blood pressure significantly; interacts with diabetes/hypertension medications	—
103	Monk Fruit Extract (Luo Han Guo)	Natural-derived sweetener	Limited long-term human data; may cause digestive issues in large amounts	—
104	Erythritol (E968)	Sugar alcohol sweetener	New 2023 study links high blood levels to cardiovascular risk; laxative in large amounts	—
105	Xylitol (E967)	Sugar alcohol sweetener	Laxative at doses above 50g/day; toxic to dogs (veterinary emergency); mild digestive issues	—
106	Mannitol (E421)	Sugar alcohol sweetener	Strong laxative effect; diarrhoea; bloating; should not be given to infants	EU (labelling: "excessive consumption may produce laxative effects")
107	Sorbitol (E420)	Sugar alcohol / humectant	Laxative effect above 10g; diarrhoea; bloating; malabsorption in some	EU (labelling: "excessive consumption may produce laxative effects")
108	Sugar (Sucrose)	Sweetener	Obesity; type 2 diabetes; tooth decay; non-alcoholic fatty liver disease; inflammation	—
109	High Fructose Corn Syrup (HFCS)	Sweetener	Directly metabolized to fat in liver; linked to NAFLD; obesity; insulin resistance	Several countries restrict in beverages (Hungary tax)
110	Glucose Syrup (E440-type)	Sweetener / bulking agent	High glycaemic index; rapid blood sugar spikes; weight gain with regular consumption	—
111	Invert Sugar / Invert Syrup	Sweetener / humectant	High calorie; rapid blood sugar spikes; tooth decay; same metabolic concerns as HFCS	—
112	Fructose (crystalline)	Sweetener	Metabolized by liver into fat; linked to gout, fatty liver disease with excess consumption	—
113	Corn Syrup (light/dark)	Sweetener / humectant	High glycaemic; linked to weight gain; tooth decay; insulin spikes	—
114	Maltodextrin (E1400)	Carbohydrate bulking agent	Glycaemic index higher than sugar (GI ~110-136); disrupts gut microbiome; rapid blood sugar rise	—

115	Dextrose (D-Glucose)	Sweetener / fermentation substrate	High glycaemic index; rapid blood sugar elevation; weight gain with regular use	—
116	Agave Nectar / Agave Syrup	Sweetener	Very high fructose content (70-90%); same liver-fat concerns as HFCS despite "natural" label	—
117	Brown Rice Syrup	Sweetener	High GI (98); arsenic contamination risk from rice source	—
118	Palm Oil	Vegetable oil	High saturated fat ~50%; raises LDL cholesterol; 3-MCPD esters (potential carcinogen) in refined oil	—
119	Palm Kernel Oil	Vegetable oil (highly saturated)	Higher saturated fat than palm oil (~82%); strongly raises LDL cholesterol	—
120	Palmolein	Fractionated palm oil	High saturated fat; may raise LDL; 3-MCPD and glycidol ester contamination in refined forms	—
121	Hydrogenated Vegetable Oil	Modified fat	May contain residual trans fats (<0.5g threshold allows "0g trans fat" labelling); cardiovascular risk	—
122	Partially Hydrogenated Oil (PHO)	Trans fat source	WHO estimates trans fats cause 500,000 cardiovascular deaths per year; increases LDL, decreases HDL	USA (FDA banned 2020), EU (maximum 2g per 100g of fat since 2021), Canada (banned 2018), Denmark (pioneer ban 2003)
123	Interesterified Fat	Modified fat for margarine	Increases blood glucose and insulin response; displaces phospholipids; limited human data	—
124	Cottonseed Oil	Vegetable oil	Naturally contains gossypol (toxic to male fertility); usually refined out but contamination risk exists	—
125	Refined Vegetable Oil (generic)	Cooking oil	3-MCPD esters and glycidol esters form during high-temperature refining — possible carcinogens	EU (maximum levels for 3-MCPD set in 2020)
126	Soy Lecithin (E322)	Emulsifier	Soy allergen (must declare); processed from hexane-extracted soy; digestive issues in sensitive	—
127	Mono- and Diglycerides of Fatty Acids (E471)	Emulsifier	May contain trace trans fats; source fat often unclear (palm, hydrogenated); digestive issues	—
128	Polyglycerol Polyricinoleate / PGPR (E476)	Emulsifier in chocolate	Liver and kidney enlargement in animal studies at high doses; often used to replace cocoa butter cheaply	—
129	Ammonium Phosphatides (E442)	Emulsifier in chocolate	Synthetic; limited long-term human data; may affect mineral absorption	—
130	Carrageenan (E407)	Thickener / gelling agent	Degraded carrageenan causes intestinal inflammation; linked to IBD; triggers immune response in gut cells	EU (banned in infant formula), USA (National Organic Program debating removal)
131	Polysorbate 80 (E433)	Emulsifier / solubilizer	Increases gut permeability; alters gut microbiome composition; may promote metabolic syndrome	—
132	Polysorbate 60 (E435)	Emulsifier	Similar gut microbiome disruption as Polysorbate 80; limited long-term human data	—
133	Polysorbate 20 (E432)	Emulsifier / solubilizer	Gut barrier disruption in animal studies; may promote low-grade intestinal inflammation	—

13 4	DATEM — Diacetyl Tartaric Acid Esters (E472e)	Emulsifier in bread	Generally safe; may cause digestive upset in some; fat source often palm oil	—
13 5	Sodium Stearoyl Lactylate (E481)	Emulsifier / dough conditioner	Generally safe; milk derivative — dairy allergen for sensitive individuals	—
13 6	Acetylated Monoglycerides (E472a)	Emulsifier	Usually safe; fat source often from palm oil or hydrogenated fat	—
13 7	Stearoyl Lactylate (E482)	Emulsifier	Milk-derived; dairy allergen; digestive issues in sensitive	—
13 8	Carboxymethylcellulose / CMC (E466)	Thickener / stabilizer	Disrupts gut microbiome; promotes intestinal inflammation; linked to IBD and colorectal cancer in mice	—
13 9	Modified Starch (various E1400s)	Thickener / binder	Chemically modified with reagents (octenyl succinic acid, acetate, phosphate); high GI; digestive issues	—
14 0	Guar Gum (E412)	Thickener / stabilizer	Digestive bloating; gas; diarrhoea; inhibits absorption of some medications	—
14 1	Xanthan Gum (E415)	Thickener / stabilizer	Digestive issues (gas, bloating) in large amounts; may worsen IBS symptoms	—
14 2	Konjac Gum / Glucomannan (E425)	Thickener / gelling agent	Choking hazard in jelly form (banned in EU/USA for mini cups); diarrhoea; bloating	EU (banned in mini cups / jelly products), USA (banned in similar forms), Australia
14 3	Cellulose Gum (E466 synonym)	Thickener	Same gut microbiome disruption concerns as CMC	—
14 4	Methyl Cellulose (E461)	Thickener / bulking agent	Diarrhoea; bloating; may interfere with mineral absorption	—
14 5	Hydroxypropyl Methylcellulose (E464)	Thickener / coating agent	Digestive laxative effect in large amounts; bloating; gas	—
14 6	Pectin (E440) — high dose	Gelling agent	Generally safe; large doses may reduce absorption of nutrients (iron, zinc)	—
14 7	Locust Bean Gum (E410)	Thickener / stabilizer	May cause digestive issues; flatulence; usually safe at normal levels	—
14 8	Agar (E406)	Gelling agent	May cause digestive discomfort; loose stools in large amounts	—
14 9	Tara Gum (E417)	Thickener	Limited long-term human data; may cause digestive issues	—
15 0	Sodium Alginate (E401)	Thickener / gel	Generally safe; large amounts may cause digestive issues	—
15 1	Potassium Sorbate (E202)	Preservative	Allergic reactions; contact dermatitis; migraines in sensitive people; DNA damage concerns in vitro	—
15 2	Sorbic Acid (E200)	Preservative	Skin and mucous membrane irritant; allergic reactions in sensitive people	—
15 3	Calcium Propionate (E282)	Bread preservative	Linked to irritability, restlessness, and sleep disturbance in children	—
15 4	Sodium Propionate (E281)	Preservative in bread	May cause migraines; digestive discomfort; limited data on long-term effects	—
15 5	Natamycin (E235)	Antifungal preservative	Gastrointestinal irritation; nausea; allergic reactions; antibiotic resistance concerns	Several countries restrict topical use

156	Benzoic Acid (E210)	Preservative	Reacts with vitamin C to form benzene; asthma trigger; hives in sensitive people	EU (concentration limits), Several countries require labelling
157	Citric Acid (E330) — cosmetic grade high %	Acid / preservative / chelator	High-concentration cosmetic use causes enamel erosion, skin irritation, photosensitivity	—
158	Phenoxyethanol	Preservative in cosmetics	EU restricts to 1%; toxic to infants (affects CNS); skin irritant; allergic reactions	EU (restricted 1% max; banned in products for nappy area of children)
159	Benzyl Alcohol	Preservative / solvent	Skin sensitizer; toxic to neonates in IV use; contact dermatitis	EU (must declare as fragrance allergen above 0.001%)
160	Chlorphenesin	Preservative in cosmetics	Limited safety data; muscle relaxant (toxic at high levels); irritant	EU (concentration restricted)
161	Benzalkonium Chloride	Preservative / antimicrobial	Asthma aggravation from inhalers; skin sensitizer; eye irritant; antimicrobial resistance	EU (restricted in cosmetics), Replaced in many inhaler formulations
162	Sodium Lauryl Sulphate (SLS)	Anionic surfactant	Strips skin barrier lipids; dries and irritates skin/scalp; triggers aphthous ulcers (canker sores)	EU (restricted in oral care products)
163	Sodium Laureth Sulphate (SLES)	Anionic surfactant	Less irritating than SLS but potential 1,4-dioxane contamination (carcinogen) from ethoxylation process	—
164	Ammonium Lauryl Sulphate (ALS)	Anionic surfactant	Similar irritation profile to SLS; scalp sensitivity; dry skin	—
165	Ammonium Laureth Sulphate	Anionic surfactant	Skin irritation; potential 1,4-dioxane contamination from manufacturing	—
166	Cocamidopropyl Betaine (CAPB)	Amphoteric surfactant	Allergic contact dermatitis; impurities from manufacturing (DMABA) are stronger allergens	—
167	Sodium Coco Sulphate	Anionic surfactant	Irritating at high concentration; similar to SLS in irritation profile	—
168	Decyl Glucoside	Non-ionic surfactant	Very mild; rare contact allergy possible; generally among safest surfactants	—
169	TEA Lauryl Sulphate	Anionic surfactant	Irritating; TEA can form carcinogenic nitrosamines with certain other ingredients	EU (TEA-nitrosamine formation restricted)
170	Dimethicone	Silicone conditioner / skin smoother	Occlusive; traps bacteria under skin leading to breakouts; environmental persistence (not biodegradable)	—
171	Dimethiconol	Silicone for hair	Builds up on hair shaft; weighs hair down; requires sulfates to remove; environmental persistence	—
172	Cyclopentasiloxane (D5)	Volatile silicone	Persistent in aquatic environment; potential endocrine disruption; fish reproductive toxicity	EU (banned in rinse-off cosmetics above 0.1% since 2020), Canada (considered toxic to environment)
173	Cyclotetrasiloxane (D4)	Volatile silicone	Endocrine disruptor; reproductive toxin (Category 2); very persistent in environment	EU (banned in cosmetics above 0.1%), Canada (toxic substance list)
174	Cyclohexasiloxane (D6)	Volatile silicone	Persistent bioaccumulative; under review for toxicity and environmental harm	EU (under restriction review)
175	PEG-100 Stearate	Emulsifier / thickener	Potential 1,4-dioxane contamination from ethoxylation; penetration enhancer	—
176	PEG-40 Hydrogenated Castor Oil	Solubilizer / emulsifier	Potential 1,4-dioxane contamination; skin sensitizer if impure	—

177	PEG-7 Glyceryl Cocoate	Emulsifier	Penetration enhancer — may increase absorption of other (potentially harmful) ingredients	—
178	Cetareth-20	Emulsifier	Potential 1,4-dioxane contamination; skin irritant at high concentrations	—
179	Laureth-7	Surfactant / emulsifier	1,4-dioxane contamination possible; skin sensitizer	—
180	Disodium EDTA	Chelating agent	Removes beneficial calcium and magnesium; environmental pollutant (does not biodegrade easily); penetration enhancer	—
181	Tetrasodium EDTA	Chelating agent	Binds calcium and zinc; may increase penetration of other chemicals; poor biodegradability	—
182	Tetrasodium Etidronate	Chelating agent	May interfere with bone mineralisation with long-term use; poorly biodegradable	—
183	Propylene Glycol (E1520)	Humectant / solvent	Skin irritation at high concentrations; neurotoxicity at very high IV doses; contact dermatitis	—
184	Butylene Glycol	Humectant / solvent	Skin irritation; mild sensitizer; large amounts potentially toxic	—
185	Hexylene Glycol	Humectant / solvent	Skin and eye irritant at concentration; relatively limited safety data	—
186	Isopropyl Alcohol (IPA)	Solvent / astringent	Dries and strips skin barrier; central nervous system depression at high skin absorption	—
187	Ethyl Alcohol / Denatured Alcohol (SD Alcohol)	Solvent / astringent	Dries skin; disrupts skin barrier with frequent use; worsens rosacea and eczema	—
188	Titanium Dioxide (E171) — food use	White colorant / opacity agent	Nanoparticle form causes DNA damage; banned in EU as food additive since 2022; still used in India	EU (banned as food additive since 2022), UK (under review)
189	Beta-Carotene (E160a) — high dose supplements	Orange-yellow colour / pro-vitamin A	High dose beta-carotene supplements increase lung cancer risk in smokers by 18% (CARET study, IARC)	—
190	Caramel (E150a — plain)	Brown colour from sugar heating	Generally safest caramel type; high amounts may cause digestive issues	—
191	Iron Oxides (E172)	Brown/red/yellow colour	Generally safe; nanoparticle forms under study for potential toxicity	—
192	Annatto (E160b)	Yellow-orange natural colour	Rare but well-documented allergic reactions; hives; IBS aggravation in sensitive	—
193	Paprika Extract (E160c)	Red natural colour	May cause allergic reactions; skin sensitivity; generally mild concern	—
194	Carmine / Cochineal (E120)	Natural red colour from insects	Severe allergic reactions including anaphylaxis; not vegetarian/vegan; must declare on label	EU (mandatory declaration)
195	Ammonium Bicarbonate (E503)	Leavening agent	Generally safe; residual ammonia if not fully baked out; irritant in raw state	—
196	Sodium Aluminosilicate (E554)	Anticaking agent	Aluminium compound; potential aluminium accumulation with high consumption	—
197	Aluminium Sodium Silicate (E559)	Anticaking agent	Aluminium exposure concerns; nausea and digestive issues at high doses	—

198	Aluminium Silicate / Kaolin (food grade)	Anticaking / processing aid	Aluminium compound; potential neurotoxicity with excess cumulative consumption	EU (usage limits set)
199	Silicon Dioxide / Silica (E551)	Anticaking agent	Nanoparticle form possibly affects gut health; inhalation causes silicosis (industrial exposure)	—
200	Calcium Silicate (E552)	Anticaking agent	Generally safe; large amounts may cause digestive issues	—
201	Magnesium Carbonate (E504)	Anticaking / colour retention	Large doses may cause digestive issues; laxative effect	—
202	Microcrystalline Cellulose (E460)	Bulking agent / anticaking	Generally safe; may cause digestive discomfort in large amounts	—
203	Caffeine	Stimulant / flavour	Anxiety; insomnia; palpitations; dependency/withdrawal; miscarriage risk above 200mg/day in pregnancy	—
204	Guarana Extract	Natural caffeine source	Same effects as caffeine but often unlabelled; high caffeine content per gram; palpitations	—
205	Kola Nut Extract	Natural caffeine source	High caffeine; tannins irritate gut lining; interacts with blood-thinning medications	—
206	Taurine (in energy drinks)	Amino acid added to energy drinks	Concern about synergistic effects with caffeine and alcohol in energy drinks; limited long-term data	—
207	Inositol (in energy drinks)	B-vitamin related compound	Generally safe at normal doses; laxative effect at high doses	—
208	Niacin (added high dose)	B3 vitamin — added to fortified foods	High dose (above 35mg/day) causes flushing, liver damage; only an issue with supplement doses	—
209	Yeast Extract (natural glutamate)	Flavour enhancer	Natural source of free glutamates; triggers MSG-like reactions in highly sensitive individuals	—
210	Hydrolysed Vegetable Protein (HVP)	Flavour enhancer	Contains free glutamates; headaches in MSG-sensitive people; may contain trace 3-MCPD (carcinogen)	EU (3-MCPD limits set)
211	Autolysed Yeast	Flavour enhancer	Free glutamates similar to MSG; headache, flushing in sensitive people	—
212	Natural Flavours (complex mixtures)	Flavouring	FDA "natural" category is broad; may still contain allergens; no full disclosure required in India	—
213	Artificial Flavours	Synthetic flavouring	Some contain allergens; certain compounds (e.g., diacetyl in butter flavour) linked to lung disease at occupational exposure	—
214	Salt / Sodium Chloride (excess)	Flavour / preservative	Hypertension; cardiovascular disease; kidney disease; stroke with chronic high intake	WHO recommends below 5g/day; most Indians consume 10-12g/day
215	Phosphates (food additives E338-342)	Acidulant / leavening / preservative	Accelerates ageing of kidneys with high intake; decreases bone density; cardiovascular calcification	EU (labelling required in children's food)
216	Petrolatum (Petroleum Jelly — cosmetic grade)	Occlusive moisturiser	Pharmaceutical/cosmetic grade is safe; but non-pharmaceutical grade may contain carcinogenic PAH impurities	EU (only highly refined cosmetic grade permitted)

21 7	Lanolin	Emollient from sheep wool	Common allergen in people with wool sensitivity; pesticide residue concerns in non-purified grades	—
21 8	Mineral Oil (cosmetic grade)	Occlusive / emollient	Highly refined cosmetic grade is safe; petroleum-derived; non-comedogenic light grades safe; heavy grades comedogenic	EU (highly refined grade only)
21 9	Sodium Lauryl Sulphate (oral care)	Surfactant in toothpaste	Causes canker sores / aphthous ulcers; irritates oral mucosa; may worsen dry mouth	EU (restricted concentration in oral care)
22 0	Oat Extract — Avenanthramides	Skin-soothing	Rare oat allergy possible; generally very safe for eczema and sensitive skin	—
22 1	Lactic Acid (skin >5%)	Alpha-hydroxy acid / exfoliant	Sun sensitivity (photosensitization); irritation on broken skin; stinging	FDA requires SPF warning for OTC AHA products
22 2	Glycolic Acid	Alpha-hydroxy acid / exfoliant	Strong photosensitization; barrier disruption; burns on sensitive skin above 10%	EU (concentration and pH limits set)
22 3	Acetone	Nail polish remover / solvent	Drying to nails and cuticles; central nervous system effects at high inhalation	—
22 4	Butyl Acetate	Nail polish solvent	Skin and eye irritant; mild CNS effects at high inhalation; flammable	—
22 5	Nitrocellulose	Nail polish film-former	Flammable; may cause irritation; historically derived from cotton — generally safe in nails	—
22 6	Parabens (general / mixed)	Preservative system	Cumulative estrogen-mimicking load from multiple paraben-containing products used daily	EU (prohibited combinations of propyl, butyl, isopropyl, isobutyl parabens in leave-on products for children under 3)
22 7	Retinyl Palmitate (Vitamin A ester) — sunscreen	Antioxidant / anti-aging	When combined with UV radiation may speed development of skin tumours (animal data)	EU (concentration restricted in products used in sun)
22 8	Nanoparticles (general — cosmetics)	Delivery system / filter	Very small particles (<100nm) may penetrate intact skin or inhaled nanosprays; under ongoing review	EU (mandatory nano labelling on cosmetics)
22 9	Avobenzene (Butyl Methoxydibenzoylmethane)	Chemical UVA filter	Photodegraded rapidly by UV — becomes ineffective within 30 min unless stabilised with octocrylene	—
23 0	Octisalate (Ethylhexyl Salicylate)	Chemical UVB filter	Weak endocrine activity in some studies; skin sensitizer in sensitive individuals; photostable	—
23 1	Benzophenone-4 / Sulisobenzene	Chemical UV filter	Higher sensitization potential than other UV filters; photo-allergy possible	EU (restricted concentration)
23 2	Bemotrizinol (Tinosorb S)	Broad-spectrum UV filter	Appears safe; limited long-term data; detected in breast milk in one study	Not yet approved in USA (FDA)
23 3	Bisotrizole (Tinosorb M)	Mineral-organic hybrid UV filter	Limited long-term human data; EU-approved but not FDA-approved	Not yet approved in USA
23 4	Sodium Fluoride (in toothpaste)	Fluoride source / caries prevention	Dental fluorosis in children with excess swallowing; skeletal fluorosis at very high long-term intake	EU (max 0.15% for children's toothpaste), WHO (recommends fluoride monitoring in water)
23 5	Chlorhexidine Digluconate	Antimicrobial / oral antiseptic	Stains teeth brown with extended use; alters taste; rare anaphylaxis; disrupts oral microbiome	EU (restricted in some cosmetics)
23 6	Cetrimonium Bromide	Quaternary ammonium antimicrobial / conditioner	Skin and eye irritant at higher concentrations; environmental toxicity to aquatic organisms	EU (concentration restricted in cosmetics)

23 7	Behentrimonium Methosulfate (BTMS)	Conditioning emulsifier	Generally mild; rare contact sensitization; derived from rapeseed; safer than older quats	—
23 8	Benzethonium Chloride	Quaternary ammonium preservative / antimicrobial	Skin and eye irritant; absorbed through skin; toxicity at high systemic doses	EU (restricted in cosmetics)
23 9	Hydroxypropyl Cellulose (E463)	Thickener / binder	Digestive discomfort in large amounts; poorly digested; may interfere with drug absorption timing	—
24 0	Sucrose Esters of Fatty Acids (E473)	Emulsifier	Generally safe; high amounts may have laxative effect; fat source often palm	—
24 1	Polyglycerol Esters of Fatty Acids (E475)	Emulsifier	Generally safe at food levels; limited long-term data at high doses	—
24 2	Lactic Acid Esters of Mono- and Diglycerides (E472b)	Emulsifier in baked goods	Generally safe; milk derivatives possible — allergen consideration	—
24 3	Acetylated Distarch Phosphate (E1414)	Modified starch thickener	Chemically modified; high GI; digestive issues with large amounts	—
24 4	Octenyl Succinic Anhydride Starch (E1450)	Modified starch emulsifier	Chemical modification with OSA; residual OSA concerns; generally approved	—
24 5	Carbomer (Carbopol)	Thickening polymer in skincare	Generally safe; trace benzene contamination found in some batches (2020 recalls); neutralising agent irritation	FDA (benzene contamination recall 2020)
24 6	Acrylates Copolymer	Film-forming polymer	Generally safe topically; potential for skin sensitization in some formulations; environmental persistence	—
24 7	Hydroxyethylcellulose	Thickener / film-former	Generally safe; may cause mild digestive effects if ingested in large amounts; well-tolerated topically	—
24 8	Polyisobutene	Film-forming occlusive polymer	Petroleum-derived; comedogenic at high concentrations; environmental persistence concern	—
24 9	Sodium Bicarbonate (baking soda, excess)	Leavening / antacid	Alkalosis with excess ingestion; gas; bloating; interferes with stomach acid (digestion)	—
25 0	Potassium Sorbate + Sodium Benzoate (combination)	Dual preservative system	Combination may be more allergenic; each alone is safer; interaction with vitamin C (benzene risk)	—
25 1	Glycyrrhizin / Licorice Sweetener (high dose)	Natural sweetener from licorice root	Raises blood pressure; causes potassium loss; hormonal effects; WHO advises <100mg/day	Several countries restrict high licorice consumption in pregnancy
25 2	Diethyl Sodium Sulfosuccinate / Docusate (E480)	Surfactant / stool softener used as food wetting agent	Used medically as laxative; as food additive — limited human data; digestive effects	EU (restricted to specific uses)

GENERALLY RECOGNISED — 248 Ingredients (Safe)

#	Ingredient Name	Type / Function	Key Health Concern	Banned / Restricted In
25 3	Water (Aqua / Purified Water)	Base/solvent for all formulations	No concerns at all	—
25 4	Rose Water	Natural hydrosol from rose petals	Toning, anti-inflammatory; safe for all skin types	—

25 5	Thermal Water	Mineral-rich spring water	Soothing; rich in selenium and silica; safe	—
25 6	Ascorbic Acid (Vitamin C)	Antioxidant / skin brightener (E300)	Large oral doses may cause diarrhea or kidney stones; topically safe	—
25 7	Tocopherol / Vitamin E (E306-E309)	Antioxidant / skin conditioner	Safe at normal levels; blood thinning at very high supplement doses	—
25 8	Niacinamide (Vitamin B3)	Brightening / barrier repair / anti-aging	Safe; flushing only with oral doses >35mg; topically universally safe	—
25 9	Panthenol (Pro-Vitamin B5)	Moisturiser / wound healer	Deeply moisturising; non-sensitizing; widely safe across all skin types	—
26 0	Pyridoxine Hydrochloride (Vitamin B6)	Nutrient / scalp health	Safe at normal dietary levels; peripheral neuropathy only at extreme supplement mega-doses	—
26 1	Biotin (Vitamin B7)	Hair/nail growth supplement	Safe at normal levels; may interfere with thyroid and hormone blood test results	—
26 2	Riboflavin (Vitamin B2 / E101)	Nutrient / natural yellow color	Safe at normal levels; turns urine bright yellow (harmless)	—
26 3	Thiamine (Vitamin B1)	Nutrient	Safe at normal dietary levels; very rare allergic reactions with IV administration	—
26 4	Folic Acid (Vitamin B9)	Nutrient (critical in pregnancy)	Safe at recommended doses; very high doses may mask vitamin B12 deficiency	—
26 5	Vitamin D3 (Cholecalciferol)	Fat-soluble nutrient	Safe at recommended doses; toxicity (hypercalcemia) only at extreme supplement doses	—
26 6	Vitamin K1 (Phylloquinone)	Nutrient / clotting	Safe at dietary levels; may interact with warfarin anticoagulant	—
26 7	Retinol (Vitamin A) — low cosmetic %	Anti-aging skin ingredient	Safe in cosmetics at <0.3% (EU); avoid in pregnancy at higher concentrations	EU (max 0.05% in face products, 0.3% in body)
26 8	Ascorbyl Glucoside	Stable vitamin C derivative	Gentle, non-irritating vitamin C; safe for sensitive skin	—
26 9	Sodium Ascorbyl Phosphate	Stable vitamin C derivative	Non-irritating; stable; safe for all skin types	—
27 0	Tocopheryl Acetate (Vitamin E ester)	Antioxidant / skin conditioner	Stable vitamin E; safe; rare contact allergy possible	—
27 1	Hyaluronic Acid (HA / Sodium Hyaluronate)	Humectant / skin hydrator	Natural skin component; safe for all skin types and ages	—
27 2	Ceramide NP	Skin barrier lipid	Identical to skin-produced ceramide; restores barrier; safe for all skin	—
27 3	Ceramide AP	Skin barrier lipid	Skin-identical; supports barrier function; safe	—
27 4	Ceramide EOP	Skin barrier lipid	Skin-identical long-chain ceramide; safe and beneficial	—
27 5	Squalane (plant-derived)	Lightweight emollient	Skin-identical; non-comedogenic; stable; safe for all skin types	—
27 6	Cholesterol	Emollient / barrier repair	Skin-identical lipid; supports barrier; safe	—
27 7	Sodium PCA	Natural moisturising factor	Natural skin component; safe humectant; no concerns	—

27 8	Amino Acids (Serine, Glycine, etc.)	Moisturising / protein building blocks	Natural skin components; safe; no concerns	—
27 9	Urea (5-10% in skincare)	Keratolytic / humectant	Safe at 5-40%; higher concentrations treat skin conditions; natural skin component	—
28 0	Allantoin	Soothing / healing agent	Well-documented safety; calming; wound-healing; safe for sensitive skin	—
28 1	Beta-Glucan (oat-derived)	Immunomodulating / soothing	Highly effective soothing agent; safe for all skin types	—
28 2	Colloidal Oatmeal	Soothing for eczema/sensitive skin	FDA approved OTC skin protectant; safe; highly effective for eczema	—
28 3	Bisabolol (from chamomile)	Skin-soothing / anti-inflammatory	Gentle; anti-irritant; safe for sensitive skin	—
28 4	Collagen Hydrolysate	Film-forming / moisturising	Safe topically; too large to penetrate skin but safe; oral supplements also generally safe	—
28 5	Elastin Hydrolysate	Skin conditioner	Safe topically; moisturising film-former	—
28 6	Silk Amino Acids	Moisturising / film-forming	Safe; adds shine and softness; mild allergen rarely	—
28 7	Salicylic Acid (0.5-2%)	BHA exfoliant / anti-acne	Safe at cosmetic concentrations; avoid in pregnancy at higher concentrations	—
28 8	Niacinamide (4-10%)	Multi-functional active	Brightening, pore-minimizing, anti-inflammatory; safe even for sensitive skin	—
28 9	Azelaic Acid (up to 10%)	Anti-acne / brightening / anti-rosacea	Safe for use in pregnancy; rare stinging; well-tolerated	—
29 0	Alpha-Arbutin	Skin brightener (enzymatic precursor to hydroquinone)	Safe at cosmetic concentrations (up to 2%); degrades slowly	—
29 1	Kojic Acid (below 1%)	Skin brightener from fermentation	Safe at low concentrations; may cause temporary sensitisation at high %	—
29 2	Ferulic Acid	Antioxidant / enhances Vitamin C	Safe; no known adverse effects at cosmetic concentrations	—
29 3	Mandelic Acid	Gentle AHA exfoliant	Large molecule — less irritating than glycolic; safe for darker skin tones	—
29 4	Phytic Acid	Antioxidant / mild brightener	Safe at cosmetic concentrations; naturally from rice bran	—
29 5	Tranexamic Acid	Brightener / anti-melasma	Safe topically; oral form used medically; well-tolerated	—
29 6	Adenosine	Anti-aging / wrinkle-smoothing	Naturally occurring in all cells; safe for all skin types	—
29 7	Copper Peptide GHK-Cu	Wound healing / anti-aging	Well-studied; collagen stimulating; safe	—
29 8	Palmitoyl Tripeptide-1	Anti-aging peptide	Synthetic collagen-stimulating peptide; safe	—
29 9	Palmitoyl Tetrapeptide-7	Anti-inflammatory peptide	Reduces inflammation; safe	—
30 0	Acetyl Hexapeptide-3 (Argireline)	Anti-wrinkle peptide	Safe; works on muscle relaxation at skin surface; no systemic effect	—

30 1	Zinc PCA	Sebum-regulating mineral complex	Safe; reduces excess sebum; anti-bacterial for acne	—
30 2	Coconut Oil (Virgin)	Emollient / antimicrobial	Antimicrobial properties; safe; may be comedogenic on acne-prone skin	—
30 3	Argan Oil	Emollient / hair conditioner	Rich in vitamin E and fatty acids; safe for all skin and hair types	—
30 4	Joboba Oil / Jojoba Wax	Non-comedogenic emollient	Actually a liquid wax; closely mimics sebum; non-comedogenic; safe	—
30 5	Shea Butter	Rich emollient / anti-inflammatory	Safe for all skin types; rare latex/tree nut allergy possible	—
30 6	Sweet Almond Oil	Emollient / massage oil	Rich in oleic acid; safe; tree nut allergy caution	—
30 7	Avocado Oil	Nourishing emollient	Rich in oleic acid and vitamins; safe; non-comedogenic	—
30 8	Rosehip Seed Oil	Regenerative oil (anti-aging)	Rich in trans-retinoic acid (natural retinol) and linoleic acid; safe	—
30 9	Sunflower Seed Oil	Lightweight emollient	Rich in linoleic acid; safe; good for sensitive/eczema skin	—
31 0	Castor Oil	Occlusive / lash growth	Safe; may cause stickiness; rare allergic reactions	—
31 1	Sesame Oil	Ayurvedic emollient	Natural antioxidants; anti-inflammatory; safe; sesame allergy rare	—
31 2	Sea Buckthorn Oil	Nutrient-rich skin oil	Rich in vitamins C and E; anti-inflammatory; safe	—
31 3	Marula Oil	Lightweight emollient	High in oleic acid; antioxidant; safe for all skin types	—
31 4	Bakuchiol	Natural retinol alternative (from <i>Psoralea corylifolia</i>)	Clinically proven retinol-like effects; safe in pregnancy unlike retinol	—
31 5	Cocoa Butter	Rich emollient	Safe; antioxidant; suitable for dry skin; may be comedogenic for some	—
31 6	Mango Butter	Rich emollient	Moisturising; safe; rich in stearic acid	—
31 7	Neem Oil	Ayurvedic antimicrobial oil	Strong antimicrobial and antifungal; safe in diluted cosmetic use	—
31 8	Aloe Vera Gel / Extract	Soothing / moisturising botanical	Widely documented safety; anti-inflammatory; safe for all skin types	—
31 9	Neem Extract (leaf)	Antibacterial / antifungal botanical	Ayurvedic tradition; safe topically; not for internal use in concentrated form	—
32 0	Tulsi (Holy Basil) Extract	Adaptogenic / antimicrobial botanical	Antioxidant; adaptogenic; safe at normal use	—
32 1	Ashwagandha Extract (Withania somnifera)	Adaptogenic herb	Stress reduction; safe at recommended doses; limited data in pregnancy	—
32 2	Turmeric / Curcumin	Anti-inflammatory / antioxidant spice	Strong anti-inflammatory; safe at dietary levels; may interact with blood thinners at high supplement doses	—

32 3	Ginger Extract (Zingiber officinale)	Anti-nausea / anti-inflammatory botanical	Safe at normal levels; may interact with blood thinners at very high doses	—
32 4	Chamomile Extract (Matricaria)	Soothing / anti-inflammatory	Well-documented safety; calming for skin; rare ragweed cross-allergy	—
32 5	Calendula Extract (Marigold)	Wound-healing / anti-inflammatory	Safe; soothing for sensitive skin; mild allergen in those sensitive to Asteraceae family	—
32 6	Green Tea Extract (EGCG)	Antioxidant / anti-inflammatory	Well-studied safety; potent antioxidant; safe topically and as food	—
32 7	White Tea Extract	Antioxidant botanical	Strong antioxidant; safe	—
32 8	Rosemary Extract	Natural antioxidant preservative (E392)	Safe as natural preservative; antioxidant; anti-inflammatory	—
32 9	Lavender Extract / Oil	Calming / antimicrobial botanical	Safe at low concentrations; lavender oil above 10% can be irritating; EU listed fragrance allergen at high doses	—
33 0	Hibiscus Extract	Antioxidant / gentle AHA source	Natural AHA; safe; antioxidant	—
33 1	Rose Extract / Rose Hip	Antioxidant / astringent	Safe; anti-inflammatory; antioxidant	—
33 2	Pomegranate Extract	Potent antioxidant	Rich in ellagic acid and punicalagins; anti-inflammatory; safe	—
33 3	Centella Asiatica (Gotu Kola)	Wound healing / anti-inflammatory botanical	Madecassoside and asiaticoside accelerate wound healing; safe; recommended for sensitive skin	—
33 4	Licorice Root Extract (Glycyrrhiza)	Skin brightener / anti-inflammatory	Safe at cosmetic concentrations; brightening via glabridin mechanism	—
33 5	Cucumber Extract	Soothing / toning	Safe; cooling and anti-puffiness; mild antioxidant	—
33 6	Papaya Extract / Papain	Gentle enzymatic exfoliant	Safe at cosmetic concentrations; dissolves dead skin cells; safe for sensitive skin	—
33 7	Amla / Indian Gooseberry Extract	Antioxidant / hair strengthener	Very high Vitamin C; safe; traditional Ayurvedic use	—
33 8	Moringa Extract (Moringa oleifera)	Nutrient-rich botanical	Rich in oleic acid and antioxidants; safe	—
33 9	Brahmi (Bacopa monnieri) Extract	Cognitive adaptogen	Safe at normal Ayurvedic doses; neuroprotective	—
34 0	Neem Bark / Babool Extract	Oral care antimicrobial	Traditional oral care; antibacterial; safe in oral care products	—
34 1	Tea Tree Oil (diluted 1-5%)	Antimicrobial / antifungal essential oil	Safe at 1-5% in cosmetics; undiluted form toxic if ingested; mild skin irritant at high concentrations	—
34 2	Sandalwood Extract	Soothing / anti-inflammatory	Safe; anti-inflammatory; antioxidant	—
34 3	Vetiver Root Extract	Soothing / grounding	Safe in cosmetics; mild astringent	—
34 4	Triphala Extract	Ayurvedic antioxidant blend	Safe at normal Ayurvedic doses; digestive health	—

34 5	Giloy / Guduchi Extract (Tinospora cordifolia)	Immunomodulatory Ayurvedic herb	Generally safe; immune support; note WHO CAMH advises caution in autoimmune diseases	—
34 6	Shatavari Extract (Asparagus racemosus)	Ayurvedic adaptogen	Safe at normal doses; women's health herb	—
34 7	Zinc Oxide (cosmetic / sunscreen grade)	Mineral sunscreen / anti-inflammatory	Safest UV filter; safe even for babies; FDA category I (Generally Recognised as Safe)	—
34 8	Kaolin Clay	Absorbent / mattifying clay	Very gentle clay; safe for sensitive skin; no concerns	—
34 9	Bentonite Clay	Detoxifying / absorbent clay	Safe topically; internally FDA has concerns about lead content in some products	—
35 0	French Green Clay	Purifying / mineral-rich clay	Safe for topical use; mineral-rich; no concerns	—
35 1	Calcium Carbonate (E170)	Chalky white mineral / calcium supplement	Safe at dietary levels; gas/bloating only with very high doses	—
35 2	Magnesium Sulphate (Epsom Salt)	Muscle-relaxing mineral soak	Safe topically; oral: laxative; safe	—
35 3	Zinc (as gluconate/sulphate)	Essential mineral supplement	Safe at RDA levels; nausea at high supplement doses; excess impairs copper absorption	—
35 4	Iron (as ferrous sulphate)	Essential mineral supplement	Safe at RDA; constipation, dark stools at supplement doses; overdose toxic	—
35 5	Calcium	Essential mineral supplement	Safe at RDA; kidney stones only with very high supplement use	—
35 6	Selenium	Essential trace mineral	Safe at RDA (55mcg/day); toxicity (selenosis) above 400mcg/day	—
35 7	Beeswax (E901)	Natural wax emulsifier / protective	Safe; rare allergy in bee-pollen sensitive; moisturising and protective	—
35 8	Carnauba Wax (E903)	Plant wax (from palm leaves)	Safe glazing agent; indigestible but harmless; non-toxic	—
35 9	Candelilla Wax	Vegan wax from Euphorbia plant	Safe vegan alternative to beeswax; no concerns	—
36 0	Rice Bran Wax	Natural plant wax	Safe emollient; natural; no concerns	—
36 1	Shellac (E904)	Resin from lac insect	Safe; rare allergy; natural glazing agent	—
36 2	Whole Wheat Flour	Whole grain flour	Rich in fibre; safe; gluten-containing (celiac/gluten sensitivity note)	—
36 3	Wheat Flour (Maida)	Refined white flour	Lower fibre than whole wheat; high GI; safe at normal levels	—
36 4	Rice Flour	Grain flour (gluten-free)	Safe; gluten-free; good for sensitive digestive systems	—
36 5	Oat Flour / Rolled Oats	Whole grain (high fibre)	Rich in beta-glucan; cholesterol-lowering; safe; oat protein cross-reacts in some celiacs	—
36 6	Gram Flour (Besan)	Legume flour (chickpea)	High protein; gluten-free; safe	—
36 7	Maize / Corn Flour	Grain flour (gluten-free)	Safe; gluten-free; common in Indian cooking	—

368	Semolina (Rava / Sooji)	Coarse-ground wheat	Safe; contains gluten; good source of B vitamins	—
369	Milk / Full-fat Milk	Dairy — calcium and protein source	Safe for lactose-tolerant individuals; dairy allergen (must declare)	—
370	Skimmed Milk Powder	Low-fat dairy ingredient	Safe; good protein source; dairy allergen	—
371	Whey Protein	Dairy protein concentrate	Safe and well-studied; dairy allergen; acne trigger in some individuals	—
372	Casein / Milk Protein	Slow-release dairy protein	Safe; dairy allergen; digestive issues in lactose-intolerant	—
373	Butter	Dairy fat	Natural saturated fat; safe at normal dietary levels	—
374	Ghee (Clarified Butter)	Traditional Indian cooking fat	Rich in fat-soluble vitamins; anti-inflammatory short-chain fatty acids; safe	—
375	Cream	Dairy fat	Natural; safe; high saturated fat	—
376	Eggs / Whole Egg Powder	Complete protein source	Excellent nutrition; egg allergen (must declare); safe	—
377	Honey	Natural sweetener / antimicrobial	Safe for adults; NOT suitable for infants under 1 year (botulism risk)	—
378	Pure Apple Cider Vinegar	Fermented fruit vinegar	Safe at diluted concentrations; undiluted erodes tooth enamel	—
379	Lemon Juice / Citric Juice	Natural acidulant	Safe at normal use; enamel erosion if very frequent undiluted contact	—
380	Tamarind Extract	Souring agent / natural flavour	Safe; traditional use; may interact with some medications (blood thinners) at very high amounts	—
381	Mango Pulp / Puree	Natural fruit ingredient	Safe; good source of vitamins A and C	—
382	Tomato Puree / Paste	Natural vegetable ingredient	Safe; rich in lycopene; antioxidant	—
383	Cocoa Powder (unsweetened)	Natural chocolate flavour	Rich in antioxidants (flavanols); safe; stimulant effect from theobromine	—
384	Dark Chocolate (above 70%)	Flavour / ingredient	Rich in beneficial flavanols; safe; stimulant theobromine; safe at normal amounts	—
385	Coconut Milk / Coconut Water	Plant-based dairy alternative	Safe; naturally electrolyte-rich; high fat in milk form	—
386	Soya Milk / Soy Protein	Plant-based protein	Safe; soy allergen (must declare); phytoestrogens — generally fine at normal food amounts	—
387	Lactic Acid Culture / Lactobacillus	Probiotic bacteria	Beneficial; promotes gut health; safe; used in yogurt and fermented foods	—
388	Bifidobacterium strains	Probiotic bacteria	Well-studied beneficial bacteria; safe; promotes gut and immune health	—
389	Inulin (prebiotic fibre)	Prebiotic / dietary fibre	Feeds beneficial gut bacteria; gas and bloating in large amounts; generally safe	—
390	Psyllium Husk	Soluble dietary fibre	Highly effective for cholesterol and constipation; safe; must take with water	—

39 1	Oat Bran	Soluble fibre (beta-glucan source)	Cholesterol-lowering; safe; excellent source of soluble fibre	—
39 2	Turmeric (Haldi)	Spice / anti-inflammatory	Potent anti-inflammatory curcumin; antioxidant; safe at dietary levels	—
39 3	Cumin (Jeera)	Spice / digestive aid	Carminative; digestive aid; safe	—
39 4	Coriander (Dhania)	Spice	Digestive; antioxidant; safe	—
39 5	Cardamom (Elaichi)	Spice / digestive aid	Carminative; anti-inflammatory; safe	—
39 6	Cloves (Laung)	Spice / oral antimicrobial	Potent antimicrobial eugenol; antioxidant; safe at normal use	—
39 7	Cinnamon (Dalchini)	Spice / blood sugar moderator	Safe at normal dietary levels; cassia variety high coumarin — avoid excess supplement doses	—
39 8	Black Pepper (Kali Mirch)	Spice / bioavailability enhancer	Piperine enhances absorption of nutrients and drugs; safe at dietary levels	—
39 9	Ginger (Adrak)	Spice / anti-nausea	Well-documented safety; anti-nausea; anti-inflammatory; safe	—
40 0	Garlic (Lahsun)	Spice / antimicrobial	Potent allicin antimicrobial; cardiovascular benefits; safe	—
40 1	Mustard Seeds (Sarson)	Spice	Antioxidant; safe at dietary levels; mustard allergen (must declare in EU)	—
40 2	Fenugreek Seeds (Methi)	Spice / blood sugar support	May lower blood sugar; safe at dietary levels; uterine stimulant at very high amounts	—
40 3	Fennel Seeds (Saunf)	Spice / digestive carminative	Safe; carminative; digestive	—
40 4	Asafoetida / Hing	Digestive spice	Carminative; anti-flatulent; safe at normal use	—
40 5	Star Anise	Spice / flavour	Safe; digestive; antioxidant	—
40 6	Nutmeg (Jaiphal)	Spice	Safe at culinary levels; toxic (hallucinations, tachycardia) only at very high doses above 5g	—
40 7	Ajwain (Carom Seeds)	Spice / digestive aid	Thymol antimicrobial; carminative; safe at dietary levels	—
40 8	Bay Leaves	Herb / flavour	Safe; antioxidant; antimicrobial	—
40 9	Saffron (Kesar)	Spice / colorant / mood-enhancing	Safe at culinary levels (up to 1.5g/day); antidepressant properties; expensive — often adulterated	—
41 0	Poppy Seeds (Khus Khus)	Seed ingredient	Culinary use is safe; trace morphine compounds present but not pharmacologically significant at food amounts	—
41 1	Sesame Seeds (Til)	Seed ingredient	Safe; rich in calcium and antioxidants; sesame allergen (now must declare in EU/USA)	—
41 2	Curry Leaves	Herb / antioxidant	Rich in vitamins; antioxidant; safe	—

41 3	Almonds	Tree nut	Rich in vitamin E and monounsaturated fat; tree nut allergen; safe	—
41 4	Cashews	Tree nut	Rich in minerals; tree nut allergen; safe	—
41 5	Walnuts	Tree nut (omega-3 rich)	Rich in ALA omega-3; anti-inflammatory; tree nut allergen; safe	—
41 6	Pistachios	Tree nut	Rich in antioxidants; tree nut allergen; safe	—
41 7	Peanuts (Groundnuts)	Legume (commonly called nut)	Rich in protein; peanut allergy is common and can be severe — must declare	—
41 8	Flaxseeds (Alsi)	Omega-3 rich seed	Rich in ALA and fibre; safe; grind for better absorption	—
41 9	Chia Seeds	Omega-3 rich seed	Rich in fibre, omega-3; safe; drink with water to avoid choking	—
42 0	Sunflower Seeds	Seed	Rich in vitamin E; safe	—
42 1	Pumpkin Seeds	Seed (rich in zinc)	Rich in zinc and magnesium; safe	—
42 2	Natural Yogurt / Curd (Dahi)	Fermented dairy	Rich in probiotics; calcium; safe	—
42 3	Cheese Culture	Probiotic for cheese making	Beneficial bacteria; safe	—
42 4	Apple Cider Vinegar (raw, with mother)	Fermented raw vinegar	Prebiotic; antimicrobial; safe diluted; enamel erosion undiluted	—
42 5	Kimchi / Fermented Vegetables	Probiotic food	Rich in beneficial Lactobacillus; safe; sodium content to note	—
42 6	Miso	Fermented soy paste	Probiotic; safe; high sodium	—
42 7	Kefir	Fermented dairy drink	Rich in diverse probiotic strains; safe; dairy allergen	—
42 8	Brown Rice	Whole grain (high fibre)	More nutritious than white rice; safe; arsenic levels in soil — normal consumption safe	—
42 9	Quinoa	Complete protein grain	Complete protein; gluten-free; safe; saponin coating should be rinsed	—
43 0	Lentils (Dal — Masoor, Moong, Toor)	Legume protein source	Rich in protein and fibre; safe; phytic acid reduces mineral absorption — soaking helps	—
43 1	Chickpeas (Chana)	Legume protein source	High protein and fibre; safe; gas-producing — soak and cook thoroughly	—
43 2	Mung Beans (Moong)	Legume protein source	High protein; easily digestible; safe	—
43 3	Kidney Beans (Rajma)	Legume	High protein; MUST cook thoroughly — raw beans contain phytohaemagglutinin (lectin) which causes food poisoning; cooked form safe	—
43 4	Soybean	Legume protein source	Complete protein; soy allergen (must declare); phytoestrogens safe at normal food amounts	—
43 5	Gum Arabic / Acacia Gum (E414)	Prebiotic fibre / emulsifier	Prebiotic; well-tolerated at normal food amounts; safe	—

43 6	Agar (E406)	Gelling agent from seaweed	Vegan gelatin alternative; safe	—
43 7	Pectin (E440) — normal food levels	Natural gelling agent from citrus/apple	Natural fibre; cholesterol-lowering; safe at food amounts	—
43 8	Beetroot Red (E162)	Natural red colour	Safe; causes red urine/stools (harmless); antioxidant	—
43 9	Chlorophyll / Chlorophyllin (E140/E141)	Natural green colour	Safe; antioxidant	—
44 0	Turmeric / Curcumin (E100)	Natural yellow colour	Anti-inflammatory; antioxidant; safe	—
44 1	Saffron (E164 equivalent)	Natural yellow-red colour	Safe; anti-inflammatory; mood-enhancing	—
44 2	Carotenes from natural sources (E160)	Natural orange color from vegetables	Pro-vitamin A; safe from food sources (not high-dose supplements)	—
44 3	Acetic Acid (E260) — food grade dilute	Mild acidulant / vinegar acid	Safe at food grade concentrations; antimicrobial	—
44 4	Lactic Acid (E270) — food/low cosmetic	Fermentation acid / AHA	Safe in food; mild AHA in cosmetics at low concentrations	—
44 5	Malic Acid (E296) — food grade	Fruit acid / flavour enhancer	Safe at food levels; slight enamel erosion risk with very high amounts	—
44 6	Tartaric Acid (E334)	Fruit acid from grapes	Safe at normal food levels	—
44 7	Fumaric Acid (E297)	Acidulant	Safe at approved food levels	—
44 8	Cetyl Alcohol	Fatty alcohol emollient/emulsifier	Not an intoxicating alcohol; skin conditioner; safe; non-irritating	—
44 9	Cetearyl Alcohol	Fatty alcohol emollient	Safe; moisturising; non-irritating; well-tolerated	—
45 0	Stearyl Alcohol	Fatty alcohol emollient	Safe emollient; skin-softening; no concerns	—
45 1	Behenyl Alcohol	Fatty alcohol conditioner	Safe; smoothing; used in hair care	—
45 2	Stearic Acid	Fatty acid emollient	Skin-identical; safe; solidifying agent	—
45 3	Palmitic Acid	Fatty acid emollient	Naturally abundant in skin; safe	—
45 4	Caprylic / Capric Triglyceride (MCT)	Lightweight emollient from coconut	Non-comedogenic; safe; derived from coconut/palm kernel	—
45 5	Isopropyl Myristate	Lightweight emollient	Safe; some reports of comedogenicity in susceptible skin	—
45 6	Cetyl Esters	Emollient	Plant-derived wax ester; safe	—
45 7	Zinc Oxide (micronised, non-nano)	Mineral broad-spectrum sunscreen	Safest UV filter; FDA Category I (GRAS); non-toxic; good for sensitive skin	—
45 8	Titanium Dioxide (micronised, non-nano)	Mineral UVB sunscreen	Safe in non-nano form; FDA Category I (GRAS); does not penetrate intact skin	—

459	Glycerin / Glycerol (E422)	Humectant / solvent	Safe; moisturising; non-irritating; natural by-product of soap making	—
460	Sodium Hyaluronate (salt of HA)	Humectant / hydrator	Smaller than HA — penetrates slightly better; safe; skin-identical	—
461	Betaine (from sugar beet)	Humectant / hair conditioner	Safe; naturally derived; moisturising; gentle	—
462	Trehalose	Natural stabilizer / humectant	Safe; naturally occurring in many organisms; moisturising	—
463	Inositol	B-vitamin related compound	Naturally occurring; safe at normal food and cosmetic doses	—
464	Lactic Acid Culture / Bifidus	Probiotic bacteria	Beneficial; safe	—
465	Natural Vanilla Extract	Flavouring	Safe; antioxidant; natural	—
466	Natural Fruit Extracts (general)	Flavour / antioxidant	Generally safe from natural fruit sources	—
467	Rice Bran Extract	Antioxidant / moisturising	Rich in gamma-oryzanol; safe; antioxidant	—
468	Zinc Gluconate	Zinc supplement / anti-acne	Safe at normal doses; anti-inflammatory for acne	—
469	Boswellia / Frankincense Extract	Anti-inflammatory Ayurvedic resin	Well-studied; safe at normal doses; anti-inflammatory	—
470	Peppermint Oil (diluted)	Cooling / antimicrobial essential oil	Safe at 1-5%; cooling sensation; unsafe undiluted or near infants' faces	—
471	Clove Oil (diluted)	Antimicrobial / analgesic essential oil	Safe diluted in oral care (eugenol); antimicrobial	—
472	Eucalyptus Oil (diluted)	Decongestant / antimicrobial	Safe diluted; unsafe near infants under 2; avoid ingestion	—
473	Activated Charcoal (food grade)	Detoxifying / cleansing	Safe topically; orally may absorb medications — separate by 2 hours	—
474	Aquaxyl (Xylitylglucoside)	Novel moisturising active	Derived from xylitol and glucose; safe; well-tolerated	—
475	Phytosphingosine	Skin-identical ceramide precursor	Natural skin component; safe; anti-bacterial and anti-inflammatory	—
476	Madecassoside (from Centella Asiatica)	Wound healing / anti-inflammatory	Well-studied; safe; particularly good for sensitive/redness-prone skin	—
477	Asiaticoside (from Centella Asiatica)	Collagen synthesis / wound healing	Well-studied safety; promotes collagen production	—
478	Bakuchiol	Natural retinol alternative	Safe in pregnancy; clinically comparable to retinol for wrinkles; non-irritating	—
479	Spirulina (Arthrospira platensis)	Blue-green algae superfood supplement	Excellent protein and B12 source; safe at recommended doses; avoid if on blood thinners or immunosuppressants	—
480	Chlorella	Green algae detox supplement	Rich in chlorophyll; safe; may bind to heavy metals and medications — separate from medications	—

48 1	Omega-3 Fatty Acids (EPA/DHA from fish oil)	Essential fatty acid supplement	Cardioprotective; anti-inflammatory; safe; high doses may increase bleeding time — monitor with anticoagulants	—
48 2	CoQ10 (Ubiquinone / Ubiquinol)	Mitochondrial antioxidant / anti-aging	Safe and well-studied; may reduce effectiveness of warfarin at high doses; beneficial for heart health	—
48 3	Resveratrol (from red grapes/berries)	Polyphenol antioxidant	Anti-aging; anti-inflammatory; safe at food levels; very high supplement doses interact with blood thinners	—
48 4	Quercetin	Flavonoid antioxidant (found in onions, apples)	Potent anti-inflammatory; antihistamine properties; safe at food levels; high supplements may interact with medications	—
48 5	Vitamin B12 (Cyanocobalamin)	Essential vitamin for nerve function	Safe at all recommended doses; critically important for vegetarians/vegans; no known toxicity	—
48 6	Grape Seed Extract (OPC)	Oligomeric proanthocyanidins antioxidant	Potent antioxidant; anti-inflammatory; safe; may interact with blood thinners at high doses	—
48 7	Blueberry Extract / Anthocyanins	Polyphenol antioxidant	Antioxidant-rich; anti-inflammatory; safe; beneficial for cognitive health	—
48 8	Tapioca Starch (native)	Gluten-free starch from cassava	Safe; gluten-free; digestible; widely used in Indian snacks (sabudana)	—
48 9	Corn Starch (native / unmodified)	Natural food starch	Safe; gluten-free; common thickener; high GI but fine at normal amounts	—
49 0	Arrowroot Starch	Natural starch from Maranta arundinacea	Easily digestible; safe; traditional use; gentle on the stomach	—
49 1	Potato Starch	Natural starch	Safe; resistant starch (when cooled) feeds beneficial gut bacteria	—
49 2	Sodium Bicarbonate (baking soda, cooking use)	Leavening agent	Safe at baking amounts; neutralises acids; no concerns at culinary levels	—
49 3	Potassium Chloride (E508)	Salt substitute / mineral	Safe at dietary levels; useful low-sodium salt substitute; metallic taste at high amounts	—
49 4	Sea Kelp / Brown Seaweed Extract	Iodine-rich marine botanical	Rich in iodine and minerals; safe at normal use; excess iodine can affect thyroid	—
49 5	Bamboo Extract / Bamboo Silica	Silica-rich plant extract	High natural silica; supports hair and nail strength; safe	—
49 6	Sunflower Lecithin	Non-GMO emulsifier from sunflower	Soy-free emulsifier; safe for soy-sensitive individuals; no concerns	—
49 7	Oat Kernel Oil	Emollient from oats	Rich in beta-glucan and fatty acids; safe for eczema-prone and sensitive skin; non-comedogenic	—
49 8	Glutathione	Master antioxidant / skin brightener	Safe topically and in food supplements at recommended doses; powerful cellular antioxidant; safe	—
49 9	Piperine (from Black Pepper)	Bioavailability enhancer (Biperine)	Significantly enhances absorption of curcumin, vitamins, and medications; safe at normal use	—
50 0	Melatonin (in functional foods / supplements)	Sleep hormone / antioxidant	Safe at low doses (0.5-3mg); regulates sleep; powerful antioxidant; avoid high chronic doses	—
